

GP4 Peer Review Form

Group name: Mote17 Reviewed by: Jivecca/Jblv

Have the team show you their SQL:

Reservations: Does the query take into account the other reservations that intersect with the requested time frame. Does the price calculation take into account the season and the day of the week?

Not fully completed

Check-in: Does the query for available rooms of a specific type take into account whether or not a room is occupied and whether or not a room is clean? Do the team's assumptions about how occupied/clean data get into their system make sense?

Yes, data is randomly assigned/generated

Check-out: Does the query include all the information necessary to create a bill - the room(s) price per day, the guest category, and the extra services?

Not fully completed

Extra Service: Does the query return all the information needed for the user to choose to purchase an extra service?

Yes, it is an unpaid service

Try each of the GUIs available, entering different search data:

- **Reservation** ✓

- **Check-in** ✓

- **Check-out** ✓

- **Extra services** ✓

Self Assessment

- Have you pushed today's version to github?

yes

- Do you have each of the GUIs working? Write the current state of each of the parts using a rough classification:
 - **Not started** - you have not started this component
 - **Temporary** - you have some code there to get it to run, but nothing like the final code should be
 - **Draft** - you have realistic code but it is unfinished
 - **Close to final** - it is near to a final state with just a few issues to fix/finish

- **Reservation:**

- SQL: *Draft*
- Functional web interface: *completed*

- **Check-in:**

- SQL: *completed*
- Functional web interface: *completed*

- **Check-out:**

- SQL: *Temporary*
- Functional web interface: *completed*

- **Extra service:**

- SQL: *Temporary*
- Functional web interface: *completed*

Reflection

After hearing comments from your peers and instructor, what areas in your full system do you plan to revise?

We plan to reinsert a bit of our loaded data/
alter script as well as finishing the rest of
the sql queries for the web-app.
